

IMPORTANT!

TECHNOLOGY CONTENT PLANNING

Dear Teachers,

As you know by now, it is always our goal to coordinate the **CONTENT** of what you are doing with your classes with our standards-based **TECHNOLOGY CURRICULUM**. Over the years, we've tried different methods including month-by-month breakdowns of our lessons asking for your corresponding content, or asking you a week in advance what you are working on with your students. These methods have not worked well.

This year, we need to go digital. We are putting the content control in your hands. Instead of us telling *you* what we are covering technology-wise (each week, hoping you will have content ready to go with it), we are letting YOU call the content shots first! This is in lieu of a weekly curriculum planning meeting that would be asking too much of your time. We'll still have our standard technology curriculum ready to go each week, but we're asking you to provide the content whenever you want your classroom lessons expanded.

EXAMPLES: If you are currently covering *fractions* and would like a technology component to complement it, then let us know at the address below. If you are covering the *Hopi Indians* and would like the students to research them, then let us know. In other words, if you have the content, we have the technology.
